

# AS-PE Aramid Fiber applied SRA Asphalt the Anem/N337

Maintenance work completed on the service road of the N337. This road section was with an asphalt paving and had on various locations cracking and damage at the edges of the asphalt. In the contract documents was prescribed to replace the top two asphalt layers. Instead, we have the top layer replaced by fiber reinforced asphalt. By the application of aramid fibers, spread in the entire mixture, is cracking countered in the top layer is more resistant to the emergence of rutting This is the first application with AS-PE aramid fibers for a provincial road.

## Project informations:

Location	Het Anem/N337
Client	Province Overijssel
Contractor	Schagen Infra Hasselt
Length road	3000 meters
Whidroad	6 meters
Top layer	5 cm. SRA Reinforced
Asphalt	3500 to SRA asphalt
Dosage	1750 kg AS-PE Aramid Fiber
